RETROFIT TO CUT EN

The commercial refrigeration industry has been challenged with refrigeration cases that heavily consume energy via door heat and gasket degradation. Rising energy prices and stringent Federal Department Of Energy requirements have set a new standard to reduce energy consumption of commercial refrigeration equipment. Anthony's innovations help solve these issues within our industry.

The Winning COMBINATION

Laboratory and field trials show LIFEPLUS GASKET and CLOZE CONTROL used together extend gasket life to twice that of PVC gaskets (250,000 cycles vs. 500,000 cycles) for major maintenance and energy use reductions.

Combine those with the energy-free ELIMINAATOR RENU door that does not require heat, and your cost savings increase exponentially.

TO REDUCE ENERGY AND ENERGY COSTS

STOP SLAMMING THE DOOR ON GASKET LIFE CLOZE CONTROL™

Patented advanced door hold open technology, the CLOZE CONTROL™ prevents slamming by softly closing cooler and freezer doors, further reducing gasket and mullion wear.

- Increases door gasket life by over 100%
- Improves energy savings by preventing air leakage through premature gasket and mullion wear
- Works with all Anthony refrigerator and freezer doors manufactured since 1995

SEAL IN ENERGY SAVINGS LIFEPLUS GASKET™

LIFEPLUS GASKET is a gasket material offered only through Anthony that maintains tight door seals at cold temperatures and has a high resistance to fatigue.

- Superior sealing performance compared standard PVC gaskets
- High durability even under harsh conditions and heavy use
- Longer life lowers maintenance costs

ENERGY-FREE DOORS ELIMINAATOR RENU™

The energy-free ELIMINAATOR RENU™ cooler and freezer doors with no heating element incorporate insulating materials for no sweat in temperatures as low as -10°F. Providing a two year payback via significantly reduced energy use and operating expenses.

- Enhanced ROI with zero-heat doors
- Retrofits made easy on Anthony frames
- Zero Clear Time with Anti-Fog™

CLOZE CONTROL™
