Gravity Flow & Standard Flat Shelving

# Gravity Flow Shelving & Gravity Flow Merchandiser

Anthony's Gravity Flow Merchandiser (GFM), GFM Roll-A-Way, and Gravity Flow Shelving (GFS) have been designed for easy installation, lower labor costs and merchandising flexibility.

- 1. Gravity Flow Shelving Systems** - Allow the display and promotion of products in any order. Fully adjustable shelves, lane dividers and front product stops provide merchandise organization without using tools. The systems accommodate a full range of product sizes, in any configuration, with products sliding forward for constant rotation.
- 2. GFM & GFS Roll-A-Way** - Designed to fit behind existing glass doors, this shelving unit is deep and strong for merchandising plastic gallons, cases, bottles and cans. The shelves may be arranged in a C-shape for ease in loading and removal of products.
- 3. Gravity Flow** - Gravity Flow shelving has expanded to include Retrofit components, allowing standard Anthony shelving to be converted to Gravity Flow shelving. These components remove the need to purchase entirely new shelving.

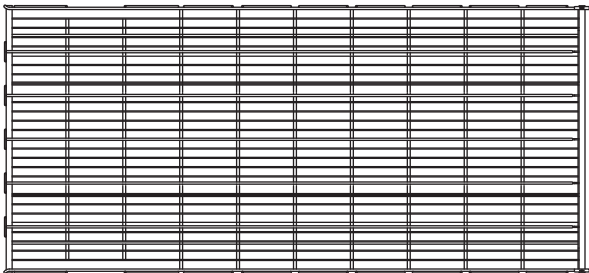

Applications
