## INSTALLATION TROUBLESHOOTING GUIDE

This installation troubleshooting guide was created to provide a quick reference to aid in resolving and troubleshooting any installation issues **BEFORE** contacting Anthony Customer Service or Warranty. Please note that there is a Quick Installations requirements guide that specifies Anthony frame installation instructions on how to properly install our frames. Read and fully understand this guide along with the Installation Manual for your specific model before installing any Anthony frame or door. To ensure you have the latest version please visit the Anthony website and locate your specific model via Support>Support Documents section. You can also find useful instructions and other tips by visiting and viewing our various videos located on Anthony website via Support>Videos section or on our YouTube Channel "WatchAnthonyVideos". Please ensure to always use proper tools and safety equipment when performing installation.

## **Performance Conditions requirements**

The installation of Anthony doors for various applications require specific installation instructions of a new frame and door. In order to achieve optimal product performance and avoid failures. See table below (Table 1.0 Operating conditions) for detailed information on your particular model. Please note that ambient conditions in your store may vary throughout the day, it is crucial to ensure that the required conditions are met at all times for optimal door performance.

**Table 1.0 :** Operating Conditions

MODEL	NORMAL TEMP	NORMAL TEMP - HIGH HUMIDITY	LOW TEMP
401, 101, ELIMINAATOR, ELIMINAATOR RENU, INFINTY 90	75°F, 55% RH AMBIENT / 35°F WALK-IN	75°F, 65% RH AMBIENT / 35°F WALK-IN	75°F, 55% RH AMBIENT / -10°F WALK-IN
INFINITY 60, VISTA C	75°F, 55% RH AMBIENT / 35°F WALK-IN	- N/A -	- N/A -

**Table 1.1:** Installation Troubleshooting

PROBLEM / ISSUE	PROBABLE CAUSES / FIXES	FINAL REMEDY	
Condensation on Door Glass, Door Rail, or Frame	Fan to Door Proximity too small	Install air deflector	
	Evaporator fans blowing cold air directly onto glass/frames	nistan an denector	
	Shelves not fully stocked	Stock merchandise	
	Door / gasket seal malfunction	See "Insulation or Air Leaks"	
	Store conditions (temperature and relative humidity) outside required parameters	Adjust HVAC / Dehumidifier settings to meet required parameters	
	Cooler / freezer temperature set too low	Adjust cooler/freezer temperature to design specified setting	
Condensation in between Glass Panes	Seal compromised cause loss of gas or vacuum (check by cleaning glass on merchandise and customer sides)	Replace door	
Ice buildup inside Freezer		See "Insulation or Air Leaks"	
	Air infiltration Box / frame not sealed according to Anthony instructions	Ensure frame and box sealed according to Anthony Quick Installation Requirements Guide	
		Conduct smoke test	
Door not closing or sealing	Check gasket to ensure proper installation		
	Check gasket for damage		
	Check Hold-Open	Replace gasket	
	Check TorqueMaster torque (plumb)	Replace Hold-Open	
	Check TorqueMaster sag	Replace TorqueMaster	
	Check Frame/Door is square	Replace Plastic Covers	
	Check Plastic covers on rails		
	Check Plastic covers on frame mullions		

## INSTALLATION TROUBLESHOOTING GUIDE

 Table 1.1 : Installation Troubleshooting - Continued

Check Power Supply  Check energy/humidity controller  Check hinge pin connections  Check glass wire connections  Check hinge pin wiring  Check hinge pin wiring  Check main voltage  Check humidity controller  Check the Amp draws to the heater wires in the frame  Adjust energy controller to Full-On Replace Energy/Humidity Controller  Replace Hinge Pin Replace wiring  Adjust energy controller to Full-On Replace Frame heater wires				
Check energy/humidity controller  Replace Power Supply Replace Energy/Humidity Controller Replace Energy/Humidity Controller Replace Hinge Pin Replace wiring  Check hinge pin wiring  Check main voltage  Check humidity controller  Check humidity controller  Adjust energy controller to Full-On Replace Frame heater wires	No Power to Frame	heck Power Supply		
No Power to Frame  Check hinge pin connections Check glass wire connections Check hinge pin wiring  Check hinge pin wiring  Check main voltage  Check humidity controller  Adjust energy controller to Full-On Replace Frame heater wires		heck energy/humidity controller	, ,	
Check glass wire connections Check hinge pin wiring  Check main voltage  Check humidity controller  Check humidity controller  Replace wiring  Adjust energy controller to Full-On Replace Frame heater wires		heck hinge pin connections	Replace Energy/Humidity Controller	
Check main voltage  Low Voltage  Check humidity controller  Check humidity controller  Replace Frame heater wires		heck glass wire connections	'	
Low Voltage  Check humidity controller  Check humidity controller  Replace Frame heater wires		heck hinge pin wiring		
Low Voltage Check humidity controller Replace Frame heater wires	Low Voltage	heck main voltage	, , ,	
		heck humidity controller		
Griedi, and yamp arable to the fleater filling in the flame		heck the Amp draws to the heater wires in the frame		
Check gasket	Door/Gasket Seal - Malfunction	heck gasket	Replace gasket Replace hinge pin Replace TorqueMaster	
		heck door mount		
Check Door is square and level Replace TorqueMaster		heck Door is square and level		
Frame not properly shimmed	Frame not Square or Plumb	rame not properly shimmed		
Frame not Square or Plumb  Frame should be square to within 1/16"  Use correct Shim to level frame		rame should be square to within 1/16"	Use correct Shim to level frame Use rubber mallet to adjust frame plumb within 1/16"	
Frame should be plumb within 1/16"  Use rubber mallet to adjust frame plumb within 1/16"		rame should be plumb within 1/16"		
Frame must be properly shimmed, level, and plumb		rame must be properly shimmed, level, and plumb		
Ensure encapsulated blue board insulation is present (Thermal Frame with Low Temp and NT High Humidity applications only)	Insulation or Air Leaks			
Use RTV-108 NSF Approved Silicone Caulk to fill the perimeter of frame on refrigeration side (inside case) and at all frame joints as required so there are no air gaps.  Install removed blue board insulation as per Guide 99-245:		refrigeration side (inside case) and at all frame joints as required so there		
Use RTV-108 NSF Approved Silicone Caulk to fill the perimeter of frame on Blue Foam Application (if required)		efrigeration side (outside the case) and at all frame joints as required s	Blue Foam Application (if required)  Seal gaps with approved NSF approved Food Grade Silicone Sealant per Quick Installation Requirements Guide.	
Ensure Gap between frame and refrigeration does not exceed 1/8", gaps larger than 1/8" will require additional shimming to reduce gap size before sealing		rger than 1/8" will require additional shimming to reduce gap size befor		
Ensure all electrical conduits are properly sealed to prevent moisture and air from migrating into the box, use RTV-108 NSF Approved Silicone Caulking if necessary		om migrating into the box, use RTV-108 NSF Approved Silicone Caulkin
